SUMMARY

Senior DevOps Engineer with 5 years in fintech, crypto and AI, owning infrastructure end-to-end as a sole or lead DevOps engineer for development teams of 15-20 engineers. Built high-availability hybrid infrastructure (VMware private cloud and AWS) for 25+ fintech microservices from scratch, set up a weekly three-stage (dev, stage, prod) release process, prepared a financial platform for PCI DSS certification, and designed infrastructure for a multi-model LLM platform. DevSecOps mindset: Vault, Teleport, Zero Trust, vulnerability scanning in CI/CD. Mentored a junior DevOps engineer.

EXPERIENCE

Senior DevOps Engineer

Confidential FinTech & Crypto Company (NDA), Dnipro, Ukraine (Hybrid) | Apr 2025 - Jul 2026
Fintech infrastructure provider (payments and crypto); company name available upon request

- Lead DevOps engineer owning the full infrastructure for the engineering team; onboarded and mentored a junior DevOps engineer.
- Scaled the VMware vSphere private cloud for high availability and reliability; standardized production, staging and development environments and security-first deployment workflows across the company.
- Ran production for several projects on AWS alongside the private cloud: EC2, VPC, Secrets Manager and PostgreSQL (both Amazon RDS and self-managed on EC2).
- Co-designed with the tech lead and team leads a three-stage (dev, stage, prod) release process: a weekly release per project, each shipping around 10 tasks already validated at every stage.
- Strengthened DevSecOps practices: Zero Trust access with Teleport, policy enforcement with Open Policy Agent (OPA), vulnerability scanning with Trivy and Snyk in CI/CD pipelines, RBAC.
- Extended monitoring, alerting and logging coverage to speed up incident response, including real-time transaction monitoring.
- **Crypto payment gateway:** delivered the complete infrastructure for a non-custodial gateway (QR/link checkout, API/POS integration, real-time dashboards), from architecture and CI/CD to monitoring and post-launch support.
- **Generative AI platform:** designed infrastructure for a multi-model platform (text, image, video, audio) integrating dozens of LLMs; deployed LiteLLM as a unified gateway and built a routing layer that selects the model per request based on plan tier and task complexity.

Middle DevOps Engineer

Confidential FinTech & Crypto Company (NDA), Dnipro, Ukraine (On-site) | Jun 2024 - Apr 2025
Promoted to Senior DevOps Engineer after 10 months

- Designed and launched the company's entire infrastructure: a VMware vSphere private cloud hosting 25+ fintech microservices across production, staging and development environments.
- Migrated production to a controlled environment, eliminated critical vulnerabilities and restored operational stability.
- Implemented secure access, network segmentation, secrets management with HashiCorp Vault, TLS and DDoS protection.
- Deployed self-hosted GitLab and fully automated CI/CD for all services, eliminating manual releases.
- Set up centralized observability with Prometheus, Grafana, Loki and Alertmanager.

Middle DevOps Engineer

Custom Solutions, Dnipro, Ukraine (Hybrid) | Sep 2023 - Jul 2024
Outsourcing company serving fintech and blockchain clients

- Sole DevOps engineer for the company, covering infrastructure for all client projects and the internal development team.
- Designed and delivered turnkey production infrastructure for multiple client projects on AWS (primary), Azure and GCP, selecting provider and stack per each client's compliance, security and technical requirements.
- Deployed Kubernetes clusters and Docker-based containerized microservice workloads; provisioned infrastructure with Terraform.

- Built CI/CD pipelines with GitLab CI, Jenkins and Argo CD, including automated rollbacks and versioning.
- Set up internal development infrastructure on VMware ESXi: self-hosted GitLab, Grafana, MinIO, Docker with Portainer and project-specific VMs emulating production.
- Produced documentation, runbooks and handover packages; consulted development teams on cloud architecture and security.

Middle DevOps Engineer

E-Groshi, Dnipro, Ukraine (Hybrid) | Mar 2022 - Mar 2023

Financial platform; member of a 3-person DevOps team

- Led preparation of infrastructure and processes for PCI DSS certification: access control, audit logging, backup and disaster recovery procedures, security policies.
- Maintained and expanded VMware infrastructure and internal tooling; kept internal services running through an organization-wide transition.

Junior DevOps Engineer

E-Groshi, Dnipro, Ukraine (Hybrid) | Jun 2021 - Mar 2022

Promoted to Middle DevOps Engineer after 9 months

- Evaluated hosting and cloud vendors, prepared a commercial comparison, selected the provider aligned with business and regulatory requirements, and helped lead the infrastructure migration.
- Took part in the disaster recovery of a 6 TB PostgreSQL cluster after a security incident and migrated it to a secure environment with zero data loss.
- Stood up core internal services for 200+ employees: GitLab, Active Directory, Jira, Confluence, monitoring and VDI.

SKILLS

Cloud & Virtualization: AWS (EC2, VPC, RDS, S3, Secrets Manager), Azure, GCP, VMware vSphere (vCenter, ESXi)

Containers & IaC: Kubernetes, Docker, Helm, Terraform, Ansible

CI/CD & GitOps: GitLab CI/CD, Argo CD, Jenkins

Security & Compliance: DevSecOps, HashiCorp Vault, Teleport, Open Policy Agent (OPA), Trivy, Snyk, Zero Trust, RBAC, PCI DSS

Observability: Prometheus, Grafana, Loki, Alertmanager, ELK Stack

Data & Networking: PostgreSQL, MongoDB, MySQL, MinIO/S3, Nginx, HAProxy, DNS, VPN

AI Infrastructure: LLMOps, LiteLLM

Linux & Scripting: Linux (Ubuntu), Bash, Python

Practices: Site Reliability Engineering (SRE), high availability, disaster recovery, incident response, microservices

COURSES & TRAINING

The Linux Foundation: Kubernetes Fundamentals (LFS258), Implementing DevSecOps (LFS262), DevOps and SRE Fundamentals: Implementing Continuous Delivery (LFS261), Jenkins Essentials (LFS267)

Projector Institute: Highload Software Architecture (2024)

EPAM University Program: DevOps Winter Program, AWS Cloud Practitioner Essentials

EDUCATION

Dnipro College of Radio Electronics, Radio Engineering | 2010 - 2014

LANGUAGES

Ukrainian: Native | English: B1 (Intermediate)
